3D-Osteotomielehre

Artikel-Nr.	Bezeichnung
10.800.00	3 D-Osteotomielehre für Umstellungsosteotomie; komplett
10.800.10	Bohrlehre für 3D-Osteotomielehre

Zusammenfassung

Bei mehrdimensionalen Osteotomien der Intertrochanterregion können intraoperativ Schwierigkeiten auftreten. Vergleicht man die präoperativ vorgenommene Planung mit dem operativen Ergebnis, so unterscheidet sich diese mitunter. Eine speziell entwickelte "Multidirektionale Osteotomielehre" für intertrochantere dreidimensionale Osteotomien trägt zur Lösung dieses Problems bei. Mit diesem Instrument können ein- oder mehrdimensionale intertrochantäre Umstellungsosteotomie technisch einfach und mit hoher Übereinstimmung zwischen geplanter und erzielter Osteotomieebene umgesetzt werden. Während der Erprobung zeigte sich, dass sich die Indikationsbreite der Osteotomielehre auch generell auf die Korrektur anderer Achsenfehlstellungen langer Röhrenknochen erweitern lässt.

Indikation

Korrekturoperationen bei Achsendeformitäten an langen Röhrenknochen, insbesondere intertrochantere bei erworbenen oder angeborenen Varus/Valgus- oder Flexions/Extensionsabweichungen des Schenkelhalses, korrekturbedürftiger Abrutsch nach Epiphyseolysis capitis femoris, bestimmte Formen der Osteonekrose des Hüftkopfes sowie posttraumatischer Fehlstellungen.

Wir hoffen, dass unser Angebot Ihren Vorstellungen entspricht.
Über Ihren Auftrag würden wir uns sehr freuen.

Mit freundlichen Grüßen
