**FAST-FIX<sup>®</sup> 360**  
Meniscal Repair System

- One-handed, fast-click implant deployment
- Minimal needle exposure behind the capsule
- Minimal disruption to the meniscus
- Greater access with improved control and implant delivery

---

**ENDOBUTTON<sup>®</sup>**  
Family of Fixation Devices

- Market-leading solution for femoral fixation
- Clinically proven with over 10 years of clinical success
- Strong and efficient

## Meniscal Repair Systems

### FAST-FIX<sup>®</sup> (all-inside)

#### FAST-FIX 360

The FAST-FIX 360 meniscal repair system offers exceptional fixation strength, easier implant deployment, smaller insertion points that minimize disruption to the meniscus, a built in depth penetration limiter and a stiffer needle shaft for enhanced control. All this to help optimize the meniscus repair.

## Meniscal Repair Systems

### Meniscal Stitcher Set (inside-out)

Meniscal Stitcher Set  
For inside-out meniscal repair

Reference #	Description
012600	Meniscal Stitcher Set
<b>System includes</b>	
012601	Double Lumen Cannula, curved up-right
012602	Double Lumen Cannula, curved up-left
012603	Double Lumen Cannula, straight
012604	Double Lumen Cannula, curved left/right
012605	Double Lumen Cannula, curved up/down
012606	Single Cannula (2 included with set)
012609	Thimble
012610	Posterior Access Cannula
012612	Bending Tool
011702	Sterilization Tray for Meniscal Stitcher Set

<b>Disposables</b>	
72202868	Needles, straight, sterile (6 per package)

#### Meniscal Stitching Needles

Reference #	Description
012615	Ti-Cron™ 10 swaged needles with #2-0, 30" long suture, for Meniscal Stitcher Set; non-absorbable, single use, sterile (12 per box)

Reference #	Description
72202868	Needles, straight, sterile (6 per package)

## Meniscal Repair Systems

### Diamond Rasps

#### Diamond Rasps

Designed specifically to freshen the edge of the meniscal tear prior to repair.

014549	45° Diamond Rasp

Reference #	Description
014550	90° Diamond Rasp

## ACL/PCL Fixation Systems

### ENDOBUTTON® Family of Fixation Devices

#### ENDOBUTTON CL Ultra Fixation Device

Delivering improved strength and stiffness, the ENDOBUTTON CL ULTRA Fixation device offers the strongest soft tissue femoral fixation currently available. Ideal for anatomic or traditional ACL reconstruction techniques. Preloaded with ULTRABRAID® #5 lead suture (white) and DURABRAID® #5 flipping suture (green) for added procedure efficiency.

Reference #	Description
72203331	10 mm ENDOBUTTON CL ULTRA
72200146	15 mm ENDOBUTTON CL ULTRA
72200147	20 mm ENDOBUTTON CL ULTRA

7210088	60 mm ENDOBUTTON CL BTB

#### XTENDOBUTTON Fixation Device

The Smith & Nephew XTENDOBUTTON Fixation Device, used in conjunction with any Smith & Nephew ENDOBUTTON device, allows a 6 to 10 mm area of the femoral tunnel to be covered. In addition to providing an effective solution for cortical blowouts, this device can accommodate a variety of femoral tunnel drilling techniques including inside-out, outside-in and medial portal.

Reference #	Description
72200134	XTENDOBUTTON Fixation Device

## ACL/PCL Fixation Systems

### ENDOBUTTON® Family of Fixation Devices

#### CL Device

Continuous loop of suture eliminates the need for knot tying. Ideal for a post or screw-and-washer technique.

Reference #	Description
72200839	25 mm CL Device
72200840	30 mm CL Device
72200841	35 mm CL Device
72200842	40 mm CL Device
72200843	45 mm CL Device
72200844	50 mm CL Device

#### ENDOBUTTON Fixation Device

This titanium button is the original endoscopic femoral soft tissue fixation device, and where the ENDOBUTTON revolution began. It can be used for single incision, soft tissue or bone-tendon-bone fixation.

Reference #	Description
013186	ENDOBUTTON, 4.0 mm x 12 mm

#### TRUKOR® Depth Gauge

This TRUKOR Depth Gauge easily estimates the native dimensions of the ACL for tunnel sizing.

Reference #	Description
72200948	TRUKOR Depth Gauge

## ACL/PCL Fixation Systems

### ENDOBUTTON<sup>®</sup> Family of Fixation Devices

#### ENDOBUTTON Indicator Selection Device

The Endobutton Indicator is intended to aid the surgeon in the selection of an ENDOBUTTON CL device.

### BIOSURE<sup>®</sup> SYNC Tibial Fixation Device

The BIOSURE SYNC Tibial Fixation Device is an intra-tunnel tibial fixation device. It was designed to improve graft fixation on the tibial side of ACL repairs, and can accommodate both single- and double-bundle reconstruction as well as primary and revision surgeries. When used to secure soft tissue grafts to bone during cruciate ligament reconstruction, the BIOSURE SYNC device provides industry-leading tibial fixation strength. The device was designed to accommodate a variety of arthroscopic ligament reconstruction techniques, and is the complete solution for cruciate ligament reconstruction.

The device features an outer sheath that employs four wings. As the BIOSURE PK Interference Screw is introduced into the sheath, the wings twist, compressing the graft strands against the bone tunnel walls. The BIOSURE SYNC device organizes the four-strand graft into quadrants, and due to the concentric placement of the device, graft-to-bone contact is maximized, creating an optimal healing environment.

The BIOSURE SYNC Tibial Fixation Device is available in four sizes, accommodating graft diameters from 5 mm to 12 mm. It is molded from PEEK-OPTIMA<sup>®</sup> material by Invibio<sup>®</sup>, offering strength, radiolucency and proven biocompatibility. The instrument system consists of an inserter, tensioner, dilators and an instrument tray. A wide range of BIOSURE PK Interference Screws are available from 6 mm to 11 mm and are also molded from PEEK material. An 18" guidewire is also available.

### BIOSURE<sup>®</sup> HA and BIOSURE PK Interference Screws

#### BIOSURE Interference Screw

The BIOSURE family of interference screws provides an all-purpose range of screws and instrumentation. BIOSURE Interference Screws incorporate the latest proven technologies to help you deliver exceptional graft fixation. Available in 24 sizes, including 6 mm screws for double bundle repairs and reverse thread screws for right knees.

#### Absorbable

Our absorbable BIOSURE HA interference screw combines poly-L-lactic acid (PLLA) with hydroxyapatite (HA), a calcium phosphate similar to the mineral compound of bone. Once absorbed, it has the fracture resistance of human corticle bone. Unlike other materials where HA has been derived from animal or coralline sources, our material is completely synthetic and does not exhibit natural variability or immunological hazards.

#### Non-absorbable

Our non-absorbable BIOSURE PK interference screw incorporates PEEK-OPTIMA<sup>®</sup> polymer from Invibio<sup>®</sup>. With a modulus similar to cortical bone, PEEK-OPTIMA material exhibits an ideal combination of strength, stiffness and toughness, together with biocompatibility. BIOSURE PK interference screws offer the revisability of an absorbable screw and inherent radiolucent characteristics from a material that has gained confidence and acceptance in the medical community for 10 years.

## ACL/PCL Reconstruction Drill Guide System

### ACUFEX<sup>®</sup> PINPOINT Anatomic ACL Guide System

The ACUFEX PINPOINT Anatomic ACL Guide System is versatile and easy-to-use. The system enables visualization of the size and placement of femoral tunnel(s) in the native anatomic location. The system is meant to help the transition from trans-tibial to medial portal drilling.

- Facilitates accurate tunnel placement without the need for bony landmarks
- Determines position of AM and PL bundles
- Complete system accommodates both single- and double-bundle reconstructions
- Addresses different technique preferences for drilling, including inside-out and outside-in
- Features multiple sizes to help cover the native footprint

### ACUFEX<sup>®</sup> DIRECTOR APPLICATION Anatomic Guide

Use of the ACUFEX DIRECTOR APPLICATION Anatomic Guide has been shown to result in more anatomic, more consistent cruciate ligament tunnel placement.<sup>1</sup> Through the use of fluoroscopy the guide allows surgeons to reproducibly define the geometric insertion points of the anteromedial and posterolateral bundles independently of the size and shape of the knee.<sup>1,2</sup>

#### Real-time visualization enables more anatomic accuracy

- Gain insight of the anatomy of the insertion site on femur and tibia
- Overcome skeletal variation among patients
- Evaluate anatomic accuracy of tunnel placement before, during and after a procedure
- Facilitate optimal patient outcomes<sup>1,2</sup>

#### Selectable overlay options support a variety of procedures

- Customizable femoral grid
- Single-bundle
- Double-bundle

#### Technique Example

Customizable single-bundle ACL femoral grid overlay option - radiographic quadrant method adapted from Bernard and Hertel

Mark intended femoral tunnel location with microfracture awl

Capture lateral x-ray image from C-arm

Use touchscreen or mouse to select the three key anatomic landmarks on the condyle e.g.

- Blumensaat's line – anterior
- Blumensaat's line – posterior
- Notch on condyle

ACUFEX<sup>®</sup> DIRECTOR APPLICATION Anatomic Guide automatically generates overlay

## HEALICORE<sup>®</sup> Trepine System

This efficient tibial tunnel reaming and coring system allows for the harvesting of tibial bone that is traditionally removed with standard reaming drills. It also provides the versatility to aid in backfilling during ACL and PCL reconstruction such as chondral lesion, patella tendon and quad-tendon donor sites.

Designed to accommodate a variety of arthroscopic ligament reconstruction techniques, the HEALICORE Trepine System compliments preferred repair and tibial fixation methods.

## ACL/PCL Drill Guide System Components and Accessories

### Offset Guides and Aimers

#### Anti-Impingement Device

Allows the surgeon to check for impingement before drilling the tibial tunnel. The reusable device snaps on the tibial guide wire and verifies adequate notch clearance as the knee is extended.

Reference #	Description
-------------	-------------

7205587	5 mm, used with 9 mm and 10 mm grafts
7205588	4 mm, used with 7 mm and 8 mm grafts

#### Endoscopic Femoral Guide System

Easily and effectively determines femoral guide wire placement by referencing the over-the-top position through the tibial tunnel. Straight or offset positions to work in-line or at 60° angle. Color coded for guide identification of size.

Reference #	Description
-------------	-------------

72201732	Universal EndoFemoral Aimer Handle
72201737	EndoFemoral Aimer, no offset
72201713	Endoscopic Femoral Aimer Arm, 3 mm offset
72201714	Endoscopic Femoral Aimer Arm, 4 mm offset
72201715	Endoscopic Femoral Aimer Arm, 5 mm offset
72201716	Endoscopic Femoral Aimer Arm, 6 mm offset
72201717	Endoscopic Femoral Aimer Arm, 7 mm offset

#### Optional

7207694	Inline Endoscopic Femoral Guide Handle (cannulated)
014800	Non-cannulated handle

#### Made to Order – Endoscopic Femoral Aimers

Reference #	Description
-------------	-------------

⚙ 3134213	Aimer, EndoFemoral (no offset)
⚙ 3134250	Aimer, EndoFemoral 7 mm offset, 2.7 mm I.D., with rounded prongs and Hudson Adapter
⚙ 3134251	Aimer, EndoFemoral 6 mm offset, 2.7 mm I.D., with rounded prongs and Hudson Adapter
⚙ 3134252	Aimer, EndoFemoral 5 mm offset, 2.7 mm I.D., with rounded prongs and Hudson Adapter

#### Offset Drill Guides

Assists in repositioning guide wire from primary guide wire location.

Reference #	Description
-------------	-------------

7205521	2–5 mm Offset Guide Unique design utilizes an integral guide pin to provide offsets as low as 2 mm
7205522	3–9 mm Offset Guide 1 mm increments allow precise repositioning of guide wires; 9 mm maximum offset aids in placement of parallel wires for twin tunnel techniques

Elevator with Wire Catcher

Indispensable 3-in-1 PCL Accessory Instrument

Reference #	Description
7207285	Elevator with Wire Catcher Sharp elevator tip elevates the PCL and periosteum from the bone when used in the fore/aft plane. Blunt elevator sides open the posterior compartment when used in a rotational motion. Wire capture hole secures the wire while reaming the tibial tunnel, protecting the neurovascular structures from the drill tip as it exits the posterior cortex.

## SPIDER2 Limb Positioner

### Simplified hands-free positioning.

Versatile and controlled, the SPIDER2 Limb Positioner allows for a full range of motion in arthroscopic and open knee procedures. Developed utilizing years of surgeon feedback, the SPIDER2 Limb Positioner offers:

- Full range of motion with easy manipulation to attain 90° or hyperflexed positions (110° and 130° of knee flexion)
- Easy disconnection of boot during surgery
- Ability to make subtle changes to internal/external rotation
- Stable positioning for meniscal repairs, including figure-four position

### HEALICOIL<sup>®</sup> PK Suture Anchors (non-absorbable)

#### HEALICOIL PK Suture Anchors

The unique open-architecture design of the HEALICOIL PK Suture Anchor utilizes significantly less material than standard solid-core anchors, dramatically minimizing the volume of material implanted in the shoulder. The HEALICOIL PK anchor inserts easily into all densities of humeral bone. Torque is distributed along the length of the anchor during insertion and improved anchor thread engagement in the bone delivers superior pullout strength.

The HEALICOIL PK Suture Anchors can be used for primary or double row repairs and in the medial row of a suture bridging technique.

#### Non-absorbable

Our non-absorbable PK suture anchors incorporate PEEK-OPTIMA<sup>®</sup> polymer from Invibio<sup>®</sup>. PEEK-OPTIMA material provides an ideal combination of strength, biocompatibility, revisability and inherent radiolucent characteristics.

### TWINFIX<sup>®</sup> Ultra HA Suture Anchors

#### TWINFIX Ultra HA Suture Anchors

Available in a variety of size options with a choice of suture configurations, TWINFIX Ultra Suture Anchors can be used for primary or double row repairs and for the medial row of a suture bridging technique.

#### Absorbable

Our absorbable HA suture anchor combines poly-L-lactic acid (PLLA) with hydroxyapatite (HA), a calcium phosphate similar to the mineral compound of bone. Once absorbed, it has the fracture resistance of human cortical bone.\* HA is a natural bone mineral shown to promote bone replacement.†

### TWINFIX<sup>®</sup> Ultra Ti Suture Anchors

#### TWINFIX Ultra Ti Suture Anchors

Available in a variety of size options with a choice of suture configurations, TWINFIX Ultra Suture Anchors can be used for primary or double row repairs and for the medial row of a suture bridging technique.

#### Non-absorbable

Titanium (Ti) suture anchors exhibit ideal fixation strength and anchor stability. Elongated distal trocar tips allow anchors to be self-tapping; without the need to predrill in most bone qualities.

### TWINFIX<sup>®</sup> Ti 5.0 and TWINFIX Ti 6.5 Suture Anchors

#### TWINFIX Ti Suture Anchors

The unique thread design of the TWINFIX Ti anchors provides extraordinary pullout strength and easy insertion in all bone conditions, and provides superior solutions to the orthopaedic surgeon.

To offer the surgeon flexibility, depending on personal preference and patient profile, TWINFIX anchors are available with DURABRAID<sup>®</sup> and ULTRABRAID<sup>®</sup> suture. ULTRABRAID is constructed from UHMW (ultra-high molecular weight polyethylene) and possesses a unique and proprietary braid configuration. This provides ULTRABRAID with its extraordinary strength properties while contributing to its superior handling qualities.

### TWINFIX Ti QUICK-T Fixation System

#### TWINFIX Ti QUICK-T Fixation System

The TWINFIX Ti QUICK-T Fixation System provides a single-step tissue repair method that can be used for primary or secondary tissue fixation. This through-tendon technique combines the proven TWINFIX Ti Soft Tissue Anchor with pre-tied knot technology, coupling the anchor with a high strength “T” bar made of PEEK-OPTIMA® LT3 polymer from Invibio®. The result is a secure, adjustable fixation system that can be used wherever a larger tissue footprint is needed.

The QUICK-T System gives surgeons the unique ability to arthroscopically perform high strength, multi-row repairs more closely resembling those found in open or mini-open procedures. The low profile “T” component is delivered through the standard anchor delivery system, eliminating the need for special cannulae, and the “T” provides a 10 mm tissue bridge once it’s deployed and secured to the tissue surface.

The QUICK-T System is also an excellent solution for biceps tenodesis and non-retracted and isolated supraspinatus tear repairs. Using the QUICK-T increases the tissue-to-bone contact area, recreating the natural footprint of the rotator cuff.

### FOOTPRINT Ultra PK Suture Anchor

#### FOOTPRINT Ultra PK Suture Anchor

Available in two sizes, 4.5 mm and 5.5 mm, the FOOTPRINT Ultra PK anchor is intended for use in the lateral row in double row suture bridging techniques.

- Uniquely designed, inner plug adjustability means more **precise** fixation and suture **tensioning** of final repair
- **Reduced suture slippage** means less gap formation and rotator cuff displacement\*
- Exclusive tap-in anchor design with offset barbed geometry threads means **high pullout strength** and **easy insertion**\*

## Rotator Cuff Soft Tissue Fixation – Non-absorbable Polymer Anchors

### FOOTPRINT PK Suture Anchor

#### FOOTPRINT PK Suture Anchor

The FOOTPRINT PK Suture Anchor consists of a non-absorbable polymer (PEEK-OPTIMA® polymer from Invibio®). The sizes include a 5.5 mm anchor, and a back-up size of 6.5 mm. The anchor is composed of two parts, the “outer shell” and the “inner plug.” The design allows the anchor to be tapped in. Then, independent of implantation, the inner plug is screwed down, securing the medial anchor suture limbs that have been captured in the nose of the anchor.

The FOOTPRINT PK Suture Anchor offers a rotator cuff repair technique that allows the surgeon to precisely apply the desired amount of suture tension that is appropriate and customized for each patient. The suture tension can be adjusted even after the anchor is implanted, unlike any competitive product on the market.

### KINSA<sup>®</sup> RC Suture Anchor

#### KINSA RC Suture Anchor

The KINSA RC Suture Anchor, 5.5 mm combination tap-in and screw-in design, is for use in arthroscopic rotator cuff procedures. Made from radiolucent high strength non-absorbable PEEK-OPTIMA<sup>®</sup> polymer from Invibio<sup>®</sup>, the anchor is preloaded with ULTRABRAID<sup>®</sup> COBRAID suture. A self-locking, sliding knot, based on the FAST-FIX<sup>®</sup> Meniscal Repair System technology, is contained within the anchor allowing secure fixation to occur without tying any knots. The design allows surgeons to insert the anchor then manually control exactly how much tension they wish to place across the rotator cuff tissue with tactile feedback. A suture loop surrounding the tissue is reduced, leaving a low profile repair with no knot stack on top of the cuff.

### BIORAPTOR<sup>®</sup> CURVED and OSTEORAPTOR<sup>®</sup> CURVED Suture Anchors and Guide System

The BIORAPTOR Curved and OSTEORAPTOR Curved Suture Anchors and Guide System are designed specifically to manage the surgical challenges of arthroscopic instability repair.

#### Optimal Anchor Placement

Curved drill guides with a 25° distal bend improve the trajectory of drilling and optimize anchor placement in the glenoid\*

#### Increased Access

- Anchors can be placed confidently in the most inferior aspect of the glenoid without the need to compromise the subscapularis tendon†
- The Curved Guide System removes the need to create additional working portals to access the repair site of a SLAP lesion†

#### Suture Anchor Flexibility

Achieve secure fixation from a choice of materials and sizes when using the BIORAPTOR 2.3 mm PK or OSTEORAPTOR 2.3 mm PLLA-HA or OSTEORAPTOR 2.9 mm PLLA-HA, preloaded on flexible inserters with high-strength ULTRABRAID<sup>®</sup> Suture

#### BIORAPTOR 2.3 Suture Anchor

The BIORAPTOR 2.3 PK Suture Anchor is a small diameter anchor for shoulder, hip and small joint repairs. Made with radiolucent high strength PEEK-OPTIMA® polymer from Invibio®, the anchor includes one pre-loaded ULTRABRAID® suture. It also features the TWINFIX® style handle inserter with depth stop. The instrumentation makes it easier to maneuver to any location inside the joint, so the repair can be positioned exactly where needed.

## Instability Soft Tissue Fixation – Suture Anchors

### BIORAPTOR® Knotless Suture Anchors

The BIORAPTOR Knotless Suture Anchor allows surgeons to control anchor tension in labral repairs post anchor insertion. Unlike other instability anchors, our knotless anchors do not rely on a bone-anchor interface for proper final fixation or suture security. Designed with an inner plug, the tension-ability and security of our sutures lies within the interior of the anchor.

#### Key Performance Characteristics

##### Independent Suture Tensioning

Our knotless anchor design gives surgeons the ability to tension the suture after anchor implantation. The inner, locking plug design captures the suture within the anchor.

##### Surgeon-controlled Tissue Shift

Achieve desired tissue shift with a solution that puts the surgeon in control. With the BIORAPTOR Knotless anchor, calculated tissue shift occurs after anchor implantation, similar to that of traditional knotted anchors.

##### May save time while protecting the joint

By eliminating the knot-tying step, surgeons may save time with less procedural steps and benefit from a solution that minimizes the risk of intra-articular damage due to knot stacks

## BIORAPTOR<sup>®</sup> 2.9 Suture Anchors

### BIORAPTOR 2.9 Suture Anchors

The BIORAPTOR 2.9 Suture Anchor is the secure solution for bioabsorbable fixation. With its cutting edge design and simple “push-in” procedure, BIORAPTOR offers a flexible surgical technique for reliable and effective instability repairs.

An improved eyelet design accommodates either one or two preloaded sutures, resulting in excellent suture sliding capability, even in the most challenging conditions, while the anchor’s unique rib shape provides superior pullout strength. BIORAPTOR is available with either DURABRAID<sup>®</sup> or ULTRABRAID<sup>®</sup> suture.

### BIORAPTOR® 2.9 AB Suture Anchor with Needles

#### BIORAPTOR 2.9 AB Suture Anchor with Needles

BIORAPTOR Suture Anchors provide a reliable soft-tissue repair solution for shoulder joint instability repairs. First designed for arthroscopic repair techniques, BIORAPTOR suture anchors are now available with needles to accommodate open and mini-open repair procedures. Available in 2.9 mm diameter, the anchor includes pre-loaded ULTRABRAID® Suture. Each end of the suture includes a swaged-on, 1/2 circle cutting needle, which is housed behind a protective pull-away panel in the inserter handle.

### TWINFIX<sup>®</sup> Ti 3.5 and TWINFIX Ti 2.8 Suture Anchors

#### TWINFIX Ti 3.5 and TWINFIX Ti 2.8 Suture Anchor

The unique thread design of the TWINFIX Ti 3.5 anchor and the TWINFIX Ti 2.8 anchor provides extraordinary pullout strength and easy insertion in all bone conditions, and provides superior solutions to the orthopaedic surgeon. Multiple suture options can save costs by reducing the number of anchors per procedure. The multiple point fixation also provides a stronger repair at the reattachment site.

## Instability Soft Tissue Fixation – Non-absorbable Polymer Anchors

### KINSA<sup>®</sup> Suture Anchor

#### KINSA Suture Anchor

The KINSA Suture Anchor, 2.9 mm, is designed for use in arthroscopic glenohumeral joint stability procedures. It is a tap-in anchor made from radiolucent high-strength non-absorbable PEEK-OPTIMA<sup>®</sup> polymer from Invibio<sup>®</sup>, the anchor is preloaded with ULTRABRAID<sup>®</sup> COBRAID suture and loaded onto a disposable inserter.

A self-locking, sliding knot, based on the Smith & Nephew FAST-FIX<sup>®</sup> Meniscal Repair System, is contained in the anchor allowing secure fixation without tying any knots. The design allows the tension placed on the tissue for fixation to be totally independent of the anchor depth. A suture loop reduces the tissue, leaving a low profile repair with no knot stack in the joint.

## Biceps Tenodesis Repair

### BICEPTOR<sup>®</sup> Tenodesis System

#### BICEPTOR Tenodesis System

Surgeons have come to rely on the Smith & Nephew line of innovative products to bring an updated approach to many surgeries. The BICEPTOR Tenodesis System was created to do just that. Our system was designed with your time in mind, to be easy and to reduce guesswork in your arthroscopic or mini-open repair.

- Fewer procedural steps mean more efficient use of your time
- No whipstitching of tendon means a sutureless repair
- Strong pullout strength means confidence in procedure
- Ability to cut tendon in last step means less guesswork and more control over tensioning

## Suture Fixation

### ULTRABRAID<sup>®</sup> High Strength Suture

#### ULTRABRAID High Strength Suture

The confidence of a strong, secure shoulder repair begins with ULTRABRAID Suture. This non-absorbable suture is composed of a special ultra high molecular weight (UHMW) polyethylene fiber and features a unique braid configuration. As a result, ULTRABRAID Suture offers special advantages over traditional polyester suture, including higher knot breaking strength, increased lubricity, and a higher resistance to fraying. ULTRABRAID Suture is preloaded on many TWINFIX<sup>®</sup> Suture Anchors (not on TWINFIX PMR 5.0) that have #2 sutures. It is also available in an individual, sterile presentation, in either white or COBRAID.

## Patient Positioning

### SPIDER2 and SPIDER Limb Positioners

#### Ideal positioning for arthroscopic procedures.

Offering instantaneous repositioning, the SPIDER2 Limb Positioner delivers exceptional control of abduction, rotation and forward flexion in beach chair and lateral decubitus positions with both forward and downward traction. Building from the success of the SPIDER Limb Positioner, new features take patient positioning to an entirely new level and enable the SPIDER2 positioner to do the repositioning work for you.

#### Distal activation switch can be easily affixed to patient or accessory.

Switch is attached to sterile drape via sticky foam backing – simply remove and adhere on a convenient location and apply a small amount of pressure to activate and move the SPIDER2 positioner.

#### The SPIDER2 and SPIDER Limb Positioners are ideal for:

**Shoulder** – used in Beach Chair and lateral positions for arthroscopic rotator cuff, instability, total shoulder and humeral nailing.

**Knee** – used for arthroscopy or arthroplasty procedures.

**Hip** – used with fracture table to provide traction.

**Elbow** – used for supine and lateral procedures allowing excellent access and repositioning of the arm.

**Wrist** – used for wrist, hand and distal forearm procedures with the ability to pronate, supinate and deviate.

**Ankle** – used for supine ankle arthroscopy providing traction and excellent access.

The T-MAX Shoulder Positioner is a patient positioning system that provides arthroscopy surgeons with the full range of features they need.

**Exposure** – shoulder pad slides laterally, providing maximum exposure to the operative shoulder

**Access** – patient can be positioned closer to the side of the OR table to allow maximum accessibility

**Adjustability** – hydraulic assist mechanism allows any angle from sitting to supine (0-90°)

**Versatility** – the T-MAX attaches to most OR tables and is designed for intraoperative use of radiographs and fluoroscopy

## Suture Passing Instrumentation

### ELITE<sup>®</sup> PASS Premium Arthroscopic Suture Shuttle

#### ELITE PASS Premium Arthroscopic Suture Shuttle

The ELITE PASS Premium Arthroscopic Suture Shuttle offers arthroscopic shoulder surgeons a flexible, single-handed method of passing suture through tissue without the need for additional instruments. The reusable instrument features the trusted ACUFEX<sup>®</sup> instrument design, while the disposable needle is composed of highly flexible steel, reducing the potential for breakage. The ELITE PASS design also gives surgeons the ability to pass suture through a single access portal, thus simplifying the procedure and decreasing costs for providers and patients. Bite is 10 mm thick and 10 mm deep.

## Suture Passing Instrumentation

### ACCU-PASS<sup>®</sup> Suture Shuttle

#### ACCU-PASS Suture Shuttle

With its single hand use design, ergonomic handle and thumb wheels, the ACCU-PASS Suture Shuttle allows for precise control of suture placement and shuttle deployment, reducing operating time and cost.

Eight different tip configurations and three shuttle loading options provide flexibility in both procedure and technique, while the solid one-piece shaft resists bending and breakage. Sterile, single patient use gives surgeons the confidence in knowing the instrument will be sharp. The system can be used with a doubled #2-0 and #0 or a single #1 and #2 monofilament suture.

### Arthroscopic Capsular Release

#### Capsular Release Punch

The geometry of these instruments, developed in conjunction with the late Dr. Doug Harryman II, will assist you in complete arthroscopic capsular release as a treatment for frozen shoulder. The extended nose of the instruments allows blunt dissection between the capsule and surrounding musculature. The pinless hinge and sharp cutting edges, synonymous with ACUFEX® instruments, offer you clean, efficient surgery.

## Patient Positioning

### Supine Hip Positioning System

With the Smith & Nephew Hip Positioning System you can perform arthroscopy on most OR tables in either the lateral or supine position. This system allows a wide range of motion: it can be easily flexed, abducted or adducted – movements especially important for emerging arthroscopic techniques.

- Patient limit 6' 4" (36" inseam), 400 lbs.
- Smallest setting equivalent to 27" inseam.
- Boom transport/storage 4.5' – 5'.
- Serial numbers are located under the bellows (under peroneal post).

## Guide Systems

### CROSSTRAC<sup>®</sup> Hip Guide System

#### CROSSTRAC Hip Guide System

Accessing the hip joint has never been easier. With its unique triangulated design and needle point accuracy, the CROSSTRAC Hip Guide System allows for consistent trajectory alignment and portal placement where you want it. Use with our standard length 4 mm arthroscopes and our new atraumatic-in-design ARTHROGARDE<sup>®</sup> Hip Access Cannulas for improved tissue protection and safety.

## Hip Arthroscopy Set Cannulas and Obturators

ARTHROGARDE® Hip Access Cannulas are designed to be atraumatic, featuring smooth ends for optimal safety and high-strength design for enhanced durability.

The uniquely designed rounded ends provide a smooth surface to help protect soft tissue when performing hip arthroscopy. Plus, they're extra strong to prevent bending or wear and tear over time. Combine with our CROSSTRAC® Hip Guide System for accurate trajectories and first-time access to the hip joint.

Please note, all ARTHROGARDE Cannulas utilize J-SNAP Irrigation Extenders 72202448 or 72202449 at top of next page.

### DYONICS EFLEX® Monopolar Radiofrequency Probes

DYONICS EFLEX probes can deflect up to 100°, enabling access into areas of the hip joint that are difficult to reach with conventional rigid probes. Tip deflection is actuated by an easy-to-pull trigger system, with an ergonomically designed handle and palm grip. EFLEX probes are also available with an integrated power cable, eliminating the need to purchase and re-sterilize separate cables.

## ARTHROPAK

### Customized Procedure Kit

#### ARTHROPAK Customized Procedure Kit

Smith & Nephew DYONICS® ARTHROPAK Customized Procedure Kits provide increased operational efficiencies and reduced supply expense. You customize your kit with your selection of disposable Smith & Nephew products for any arthroscopic procedure at a reduced cost.

- Free customized service
- Reduced product cost
- Save valuable time and demand on staff
- Streamlined ordering process
- Increased standardization
- Reduced inventory

DYONICS ARTHROPAK Customized Procedure Kits reduce the number of SKUs that need to be ordered and aggregate purchasing volume of arthroscopic products by enabling purchase from a single supplier. Please ask your local sales representative to demonstrate how DYONICS ARTHROPAK Customized Procedure Kits can benefit your practice.

Wrist Tower

- Designed specifically for wrist arthroscopy
- Exceptional access and precise maneuverability

Extremity Suture Anchors

- Designed for demanding hand/wrist and foot/ankle procedures
- Innovative handle design provides easy suture deployment
- Inserters come pre-loaded with ULTRABRAID® sutures, needles and anchors

## Suture Anchors and Anchor Accessories

The Smith & Nephew anchor systems are designed for demanding hand/wrist and foot/ankle procedures. The innovative handle design simplifies surgical procedures.

Each inserter comes pre-loaded with ULTRABRAID® sutures, needles and anchor.  
A simple tap or twist of the handle provides easy suture deployment.

### Flexor Tendon Release – Trigger Finger System

#### Trigger Finger System

In conjunction with Yasushi Nakao, M.D., Smith & Nephew has developed an endoscopic approach to “flexor tendon release” for fingers and thumbs due to stenosing tenosynovitis.

Our minimally invasive approach is designed to decrease patient discomfort while incorporating the maximum safety element of releasing the A1 pulley under direct endoscopic vision. The system and technique combine to minimize patient risk commonly associated with conventional open or blind percutaneous techniques.

### Carpal Tunnel Ligament – ECTRA<sup>®</sup> II System

#### ECTRA II System – 25 mm

The Smith & Nephew ECTRA II systems permit the surgeon to access and release the carpal tunnel ligament endoscopically, allowing access via two portals for distal and proximal cutting, while minimizing endoscopic lens fogging with good air flow. ECTRA II offers the surgeon complete visualization and control. ECTRA knives permit the surgeon to determine both the direction and depth of the cut.

- Constant and complete visualization
- Simple tools eliminate mechanical malfunctions
- Also indicated for use in plantar fasciotomy and extra-articular lateral release
- Defined channel limits the cutting zone and assists the surgeon in protecting neurovascular structures
- Each system supplied with an instructional videotape

## Customized Procedure Kit

### ARTHROPAK Customized Procedure Kit

Smith & Nephew DYONICS® ARTHROPAK Customized Procedure Kits provide increased operational efficiencies and reduced supply expense. You customize your kit with your selection of disposable Smith & Nephew products for any arthroscopic procedure at a reduced cost.

- Free customized service
- Reduced product cost
- Save valuable time and demand on staff
- Streamlined ordering process
- Increased standardization
- Reduced inventory

DYONICS ARTHROPAK Customized Procedure Kits reduce the number of SKUs that need to be ordered and aggregate purchasing volume of arthroscopic products by enabling purchase from a single supplier. Please ask your local sales representative to demonstrate how DYONICS ARTHROPAK Customized Procedure Kits can benefit your practice.

## Tissue Repair

### TRUFIT<sup>®</sup> CB Plug Kits

Smith & Nephew is focused on developing innovative tissue repair solutions for sports medicine indications. Utilizing a proprietary combination of polymers, ceramics and fibers, the material is designed to be a highly porous scaffold to support tissue incorporation and remodeling. By absorbing biologic fluids and nutrients, the material is biologically friendly.

Our tissue products on the following pages include the TRUFIT CB Plugs for cartilage repair and the TRUFIT BGS Plugs for use in filling bony voids or gaps caused by trauma or surgery that are not intrinsic to the stability of the bony structure. TRUKOR<sup>®</sup> Plus Instruments are for the preparation of precise circular sites for the TRUFIT BGS Plug or for preparation of the cartilage defect site for TRUFIT CB Plugs.

As innovators in tissue repair, Smith & Nephew will continue to develop products designed to reduce patient morbidity and improve patient outcomes.

### DYONICS RF System

Smith & Nephew is proud to present a variety of RF options to meet the specialized needs of today's arthroscopist. The DYONICS RF Radiofrequency System is designed for arthroscopic surgeons who need to rapidly resect and sculpt soft tissue and coagulate bleeding vessels. Patented bipolar technology emphasizes a high degree of control, while maximizing speed and efficiency of tissue removal.

# VULCAN<sup>®</sup> RF Arthroscopy System

## VULCAN RF Arthroscopy System

The Smith & Nephew VULCAN Arthroscopy System is designed to help improve procedure efficiency and outcome with a complete line of RF products for knee, shoulder, hip and extremity procedures.

### Flexible

Monopolar, bipolar, temperature control and impedance monitoring capabilities aid in optimizing energy delivery to produce the desired tissue effect.

### Simple

All Smith & Nephew RF probes are available with integrated cables which increases staff efficiency by eliminating cable sterilization and storage requirements.

### Convenient

Autoprobe recognition takes the guesswork out of selecting power settings. Troubleshooting is facilitated with audible alarms and error message displays.

### VULCAN RF Arthroscopy System

Systems include VULCAN generator, power cord, footswitch and manual

### SAPHYRE<sup>®</sup> Bipolar Ablation Probes

#### SAPHYRE Ablation Probes

SAPHYRE Ablation Probes deliver powerful, consistent RF energy for vigorous soft tissue ablation and hemostasis. The jewel-cut electrodes deliver focused energy to target tissue with reduced current output requirements, generating less heat than competitive ablation probes. In addition, the SAPHYRE Bipolar Ablation Probe Coolback Shaft reduces the risk of secondary tissue heating at the return electrode site.

### ABLATOR<sup>®</sup> and SCULPTOR<sup>®</sup> Monopolar Ablation Probes

#### ABLATOR Monopolar Ablation Probes

The ABLATOR monopolar probes provide a wide scope of probe styles for arthroscopic applications in the shoulder, knee and small joint. Features such as the power pocket electrode high-flow extractor lumen on suction probes help optimize tissue ablation, coagulation and visualization of the surgical site.

## VULCAN<sup>®</sup> RF Arthroscopy System

### DYONICS<sup>®</sup> GLIDER<sup>®</sup> Monopolar Articular Cartilage Probe

Designed exclusively for treatment of chondromalacia, indicated specifically for chondroplasty. The DYONICS GLIDER monopolar probe debrides and smooths diseased cartilage along the contoured surfaces of the joint while limiting the depth of chondrocyte death to 150 microns or less.†

#### Articular Cartilage Probe

The GLIDER probe is an early-intervention tool for treatment of articular cartilage disease. Through controlled application of RF energy on Grade II and III chondromalacia, the GLIDER probe is designed to maximize preservation of healthy cartilage tissue while restoring a smooth gliding surface.

#### Creates a smooth cartilage surface

In vitro studies have demonstrated the DYONICS GLIDER probe creates a smooth cartilage surface with a superficial layer of cell death.

### Temperature Control Monopolar Probes

#### TAC Probes

The Smith & Nephew TAC monopolar probes are indicated for ligament shrinkage in the shoulder as well as coagulation of soft tissue in the knee, hip and small joints. Each TAC probe tip contains a sensor that relays tissue temperature back to the generator, enabling automatic selection and control of tissue temperature during treatment. All TAC probes incorporate a malleable shaft for added flexibility.

### LIGAMENT CHISEL<sup>◇</sup> Monopolar Probes

#### LIGAMENT CHISEL Probes

The LIGAMENT CHISEL probes provide focused and precise resection, ablation and hemostasis of dense soft tissue in the shoulder, knee, hip and small joints. All probes incorporate a malleable shaft for added flexibility and access to difficult-to-reach areas.

## Single-use Blades

### DYONICS<sup>®</sup> ELECTROBLADE<sup>®</sup> Resector

DYONICS ELECTROBLADE Resectors simultaneously resect tissue and coagulate bleeding vessels, to help increase procedure efficiency and maintain visual clarity throughout the procedure. In addition, the bipolar design eliminates the need for a ground pad.

The BONECUTTER<sup>®</sup> ELECTROBLADE Resector is the first all-in-one device for subacromial decompression. A unique SURILLIUM<sup>®</sup> coating maintains blade durability and cutting efficiency throughout a procedure. Resector operates at speeds up to 8,000 RPM.

### DYONICS EFLEX<sup>®</sup> Monopolar Radiofrequency Probes

DYONICS EFLEX probes can deflect up to 100°, enabling access into areas of the hip joint that are difficult to reach with conventional rigid probes. Tip deflection is actuated by an easy-to-pull trigger system, with an ergonomically designed handle and palm grip. EFLEX probes are also available with an integrated power cable, eliminating the need to purchase and re-sterilize separate cables.

## ACUFEX<sup>®</sup> and ACUFEX Pro Handles and Tips

Smith & Nephew ACUFEX instruments are designed with a broad range of handles and tip configurations, allowing easy access to specific areas of the meniscus.

### ACUFEX Pro Handle

Selected punches, scissors and graspers feature this ergonomic handle design.

### Loop Handle

Scissors, basket punches and graspers feature our traditional loop-style handles.

### Cigar Handle

Available on rotary basket punches and scissors.

### ACUFEX Grasper Handle

All ACUFEX graspers feature this infinite-position, locking-handle design.

## Tip Selection Guide

### Straight:

The primary style for direct approach

### Upbiter:

Angled 1/4" curve at tip for enhanced access to the posterior meniscus

### Upswept:

Angled shaft follows the contour of the condyle and keeps the cutting surface parallel to the tibial plateau

### Left and Right:

Angled to reach the anterior and posterior menisci

## ACUFEX<sup>®</sup> and ACUFEX Pro Punches

ACUFEX punches are offered in a broad range of tips and configurations. Each punch is constructed with our exclusive pinless hinge design, one-piece outer shaft and hand-honed edge to provide unrivaled strength, durability and sharpness.

### Narrowline Family

The small aggressive tip design and narrow shaft provides excellent maneuverability and multiple plane-cutting capability in the posterior horn of the meniscus in the tightest joint.

### DUCKBILL<sup>®</sup> Family

The wave-tooth design combined with a wide bite allows for the maximum amount of tissue to be smoothly resected in tight knees.

### DUCKLING<sup>®</sup> Family

Combining the wide-bite horizontal cutting capability of the DUCKBILL Punch with the thinnest possible tip provides optimum maneuverability under the condyle.

### Oval Punch Family

The lowest profile tip with the largest bite offers the most versatile instrument available. The curved saw design enables smooth contouring of the meniscus.

### Blunt Nose

The blunt nose and small size enables this instrument to get into the posterior horn for flush trimming of the meniscus.

### OVERBITER<sup>®</sup> Punch

Designed to resect the superior leaflet of the medial meniscus during an arthroscopic partial meniscectomy. Elevated lower tip prevents meniscus from resting against the tibia, while blunt nose allows instrument to lie squarely against the posterior horn area for flush trimming.

### Posterior Family

The gradually tapered shaft, low-profile tip and short-jaw design permit the tip to open wide for cutting in tight posterior compartments.

### STINGRAY<sup>®</sup> Punch

The back-biting capability of this punch offers the most direct access to the anterior meniscus. Available with a left- and right-sided bite.

### Meniscal Elevator

The meniscal elevator is designed to slide easily under a tight meniscus. The elevated tip prevents the meniscus from setting back down on the tibia, making successive bites easy.

### Scoop Family – 1.0 mm

The small size of this versatile punch, combined with the horizontal cutting capability, increases maneuverability where height is a limiting factor.

### Scoop Family – 1.3 mm

The seven unique shaft configurations of the 1.3 mm punches allow maneuverability in difficult-to-access areas of the meniscus.

### Scoop Family – 1.5 mm

The long jaw and wide design of the 1.5 mm family produce a wider, deeper cut than that of the 1.3 mm punch.

### 90° Rotary

This punch offers an effective angle for trimming the difficult-to-access anterior meniscus. The unique design of the tip allows for successive bites, ideal for balancing the meniscal rim.

### Straight Scissor Punch

The scissor punch, with its small bite size, allows for increased visibility and consistently provides a clean shear cut.

### Upbiter Scissor Punch

The upcurve tip of the upbiter scissor punch permits convenient shear cutting in the posterior aspect of the knee.

## ACUFEX<sup>◇</sup> and ACUFEX Pro Punches

### Basket Punches – Narrowline

The narrow shaft and compact jaw design facilitates access and use in tight spaces, particularly useful in the posterior aspect of the knee.

## ACUFEX<sup>◇</sup> and ACUFEX Pro Graspers

A broad selection of procedure-specific tip configurations provide maximum grasping capability and allow easy access to all areas of the meniscus from a variety of approaches.

ACUFEX Grasper Handled Graspers feature an “infinite position” sliding-lock mechanism that holds tissue firmly without tearing or slipping — even in the tightest areas.

Locking mechanism is not available on ACUFEX Pro.

## Care and Maintenance

### Cleaning, Lubrication and Resharpener/Preventive Maintenance

The shafts and tips of ACUFEX® Instruments are of specially formulated and treated surgical stainless steel for optimum sharpness and resistance to corrosion. However, correct care and maintenance are important in optimizing the performance of your instruments. Please use the information here to protect your investment.

#### **Cleaning**

Whenever possible, use demineralized, distilled water, when cleaning your instruments. Mineral deposits and impurities in tap water can lead to corrosion. For washing, use a detergent or solution pH (7.0 to 11.0) for safe cleaning. Ultrasonic cleaners may be used to clean your instruments. After cleaning, dry the instruments to prevent water impurities from collecting on surfaces. Replace the instruments in the ACUFEX Sterilization Trays between uses to protect the instrument tips.

#### **Lubrication**

To protect instruments from staining and rusting prior to sterilization or storage, dip instruments into a water-soluble antimicrobial lubricant, following manufacturer's instructions. The lubricant will help to free stiff instruments; if dipping does not free an instrument, try soaking it overnight.

#### **Resharpener/Preventative Maintenance**

Instruments need to be inspected and evaluated on a regular basis to determine whether resharpener, realignment or refurbishment is needed. Routine service will aid in promoting proper function and performance. Only sharpening by Smith & Nephew can maintain and restore the sharpness of the cutting blade or tip to our original manufacturing specifications. Regular maintenance and the use of a Smith & Nephew facility for resharpener will increase the life of the instruments.

## Hip Arthroscopy Set Cannulas and Obturators

ARTHROGARDE® Hip Access Cannulas are designed to be atraumatic, featuring smooth ends for optimal safety and high-strength design for enhanced durability.

The uniquely designed rounded ends provide a smooth surface to help protect soft tissue when performing hip arthroscopy. Plus, they're extra strong to prevent bending or wear and tear over time. Combine with our CROSSTRAC® Hip Guide System for accurate trajectories and first-time access to the hip joint.

Please note, all ARTHROGARDE Cannulas utilize J-SNAP Irrigation Extenders 72202448 or 72202449 at top of next page.

## ARTHROPAK

### Customized Procedure Kit

#### ARTHROPAK Customized Procedure Kit

Smith & Nephew DYONICS® ARTHROPAK Customized Procedure Kits provide increased operational efficiencies and reduced supply expense. You customize your kit with your selection of disposable Smith & Nephew products for any arthroscopic procedure at a reduced cost.

- Free customized service
- Reduced product cost
- Save valuable time and demand on staff
- Streamlined ordering process
- Increased standardization
- Reduced inventory

DYONICS ARTHROPAK Customized Procedure Kits reduce the number of SKUs that need to be ordered and aggregate purchasing volume of arthroscopic products by enabling purchase from a single supplier. Please ask your local sales representative to demonstrate how DYONICS ARTHROPAK Customized Procedure Kits can benefit your practice.

## DYONICS<sup>◇</sup> 25 Fluid Management System

### DYONICS 25 Fluid Management System

The DYONICS 25 Fluid Management System is an easy to use, high-flow pump with consistent performance in all arthroscopic applications.

#### Easy to set up and use

- No calibration required
- Simply insert the tubing cassette and select the cannula size

#### High flow and consistent performance

- Flow rates up to 2.5 lpm
- Maintains stable pressure in the joint and also maintains clear field of view

#### Multiple tube set options

- A variety of tubing options are available, including day tubing, which enables selection of the most cost-effective solution for the facility

## Irrigation Systems

### Access 15 Irrigation System

The Smith & Nephew Access 15 Irrigation System is the fast and easy system for accurate joint pressure management. The snap-on tubing cassette makes setup a simple one-hand operation. Advanced Flow Regulation (AFR) delivers optimal flow rates for stable and accurate in-joint pressure with any inflow setup. For optimum visualization, the system's wash function is designed both to clear debris and distend the joint immediately in the event of sudden fluid loss.

- Maximum flow rate of 1.5 L/min for procedural speed and efficiency
- Cost savings by conserving saline and reducing bag changes
- Wireless remote control for full-system control from the sterile field
- Remote foot pedal for easy operation of wash function

## ACL/PCL Reconstruction Drill Guide Systems

### ACUFEX<sup>®</sup> DIRECTOR APPLICATION Anatomic Guide

Use of the ACUFEX DIRECTOR APPLICATION Anatomic Guide has been shown to result in more anatomic, more consistent cruciate ligament tunnel placement.<sup>1</sup> Through the use of fluoroscopy the guide allows surgeons to reproducibly define the geometric insertion points of the anteromedial and posterolateral bundles independently of the size and shape of the knee.<sup>1,2</sup>

#### Real-time visualization enables more anatomic accuracy

- Gain insight of the anatomy of the insertion site on femur and tibia
- Overcome skeletal variation among patients
- Evaluate anatomic accuracy of tunnel placement before, during and after a procedure
- Facilitate optimal patient outcomes<sup>1,2</sup>

#### Selectable overlay options support a variety of procedures

- Customizable femoral grid
- Single-bundle
- Double-bundle

#### ACUFEX<sup>®</sup> DIRECTOR APPLICATION Anatomic Guide

Reference #	Description
72203260	ACUFEX Director Application, Anatomic Guide System

#### System includes

72203204	ACUFEX Director Application touchpanel, software and keyboard tray
72203203	Adjustable height rolling monitor stand

#### Technique Example

Customizable single-bundle ACL femoral grid overlay option - radiographic quadrant method adapted from Bernard and Hertel

Mark intended femoral tunnel location with microfracture awl

Capture lateral x-ray image from C-arm

Use touchscreen or mouse to select the three key anatomic landmarks on the condyle e.g.

- Blumensaat's line – anterior
- Blumensaat's line – posterior
- Notch on condyle

ACUFEX DIRECTOR APPLICATION Anatomic Guide automatically generates overlay

## 400 Insufflator

### Smith & Nephew 400 Insufflator

The Smith & Nephew 400 Insufflator is the only insufflator with TAP, which delivers warmed CO<sub>2</sub> gas during laparoscopic surgery without an external control unit. Warmed gas is delivered through a unique inline mechanism in close proximity to the patient for maximum effectiveness.

Additional safety feature prevents inadvertent changes in gas flow rate and abdominal pressure during the procedure.

- In-line insufflator gas warming capability is provided through one or two parts.
- A stop safety feature prevents intra-abdominal pressure from exceeding 15 mmHg.
- A TAP feature acts as an independent abdominal pressure monitoring line.
- Simple front panel design is arranged in three distinct sections: one for gas supply, one for gas flow rate control and one for abdominal pressure regulation.

## Factory Service

Smith & Nephew expertly services your equipment at our FDA inspected, ISO 9001 certified facilities. The following are “return to factory” based services ranging from service agreements to per-incident service. Please contact your Smith & Nephew sales representative for more information. Some countries may not offer these programs. Factory-based services utilize the Return Authorization (RA) process. See page viii for details.

## Replacement Plan

The Replacement Plan is a service agreement that provides product replacement coverage for up to four years at a fixed price. Features include:

- Products are exchanged within 24 hours during normal business hours
- Coverage includes “Wear and Tear” protection. This covers use-related damage (e.g. front-end of scope is clipped)
- Available on new and existing products
- One purchase order provides coverage for an extended period of time
- Invoices can be monthly, quarterly or annual
- Software updates

### Conditions

Standard terms and conditions for the Service Agreements apply. Products to be covered must be in good working condition and not previously repaired by a non-authorized third party. Products are subject to inspection prior to coverage being extended. For a quotation in the U.S., please contact your Smith & Nephew sales representative.

## Service Exchange

This service provides product replacement on a per-incident basis. Features include:

- Products are exchanged within 24 hours during normal business hours
- Fixed price per exchange event

## Repair

This per-incident service is for customized products not available for service exchange.

Features include:

- Expert evaluation and quotation. (Declined quotations will be assessed a nominal evaluation fee)
  - Repairs done within 72 hours after your quote approval
-

## On-site Service

### On-site Service

Factory trained Smith & Nephew technicians provide maintenance and value-added services at your facility. Please contact your Smith & Nephew sales representative for more information and availability. Some locations may not offer these programs.

### ACUFEX<sup>®</sup> Edge Express

ACUFEX Edge Express is a fast, easy and convenient way to keep your ACUFEX Handheld Instruments in pristine condition. All repairs and services are performed by highly skilled craftsmen who have been comprehensively trained on precision equipment to restore ACUFEX instrumentation to Smith & Nephew's demanding quality specifications.

#### **Direct Benefits**

- Outstanding sharpness - edges are honed to factory specifications providing surgical teams with exceptional clinical performance
- Fast turn-around - repairs and sharpening are completed and delivered in days, not weeks
- Increased life and reduced capital expense - regular and proper maintenance means instruments will last longer and may result in fewer capital purchases
- Administrative ease - free shipping of service-related sharpening and loaner kits and fixed monthly payments

## Service Program Notes

### Eligibility

The following items are not eligible for Repair: Any consumable or disposable products such as light guides, lamps, cords, batteries, blades, tube sets and RF probes.

In addition to the above items, the following items are not eligible for Service Exchange or Replacement Plan: Made to Order or custom products, products beyond their designated service life, ACUFEX<sup>®</sup> instruments, cannulas, obturators, trocars, products serviced by unauthorized third parties, products sterilized by a method not approved by Smith & Nephew, or products used in a way not intended by Smith & Nephew.

### Return Authorization Process

This process is used for all service exchanges and repairs. To initiate this process in the US, call +1 800 343 5717. Press option 3 for Returns, Repairs and Service Exchanges and provide the following information. For next day service exchange, your call must be made before 3pm EST.

1. *Your Smith & Nephew customer number*
2. *Purchase order number*
3. *Model and serial number*
4. *Fax and phone number*

Smith & Nephew will issue a Return Authorization Number (RA#). To ensure proper receipt of your defective unit, please include correspondence identifying the problem, the RA# and clearly mark the shipping container with the RA#. Include your decontamination certificate. Ship to the appropriate Service Center as instructed (or listed on page **XX**). If this is a Service Exchange, and the defective unit is not received within 30 days, an invoice will be issued for the difference between the list price of a new unit and the service replacement price.

### Serial Numbers

Service agreements require valid serial numbers to be supplied by customer before an agreement can be activated.

### Standard Warranty Versus Service Agreement

Standard warranty on products is for a limited time and covers only manufacturing defects. Coverage for “use-related” damage during and after standard warranty is available through a service agreement.

### Product End-of-Support

As technology evolves, all products reach a point in their lifecycle when they can no longer be serviced. For Smith & Nephew labeled products, our policy is to provide service exchange or onsite service for at least four years after the new product is no longer available for sale. After this four year period, products may reach the end-of-support and only be repaired on a reasonable effort, time and materials basis until key components are no longer available. Made to Order (MTO) products are not bound by this support life policy and can only be repaired on a time and materials basis. For more information on product end of support, please ask your local Smith & Nephew sales representative.

## Service Replacement and Repair Warranty

All service replacement and repairs have a 90 day limited warranty

### Notes

90 day warranty on repairs only applies to the defective component repaired. Product returned that is found to have been serviced by unauthorized service providers, sterilized using a method not approved by Smith & Nephew or used in a way that is not intended by Smith & Nephew incur additional costs, regardless of warranty or service agreement status.

### Attention

Use of reprocessed, single-use blades may permanently damage, impede performance or cause failure of your Arthroscopic Shaver System. Use of such products may render any warranties null and void.

† Warranted to be free from defects in material and workmanship for their lifetime against failure in normal use.

## Financial Services

As a turnkey acquisition strategy for all Smith & Nephew products and services, we address the complexities that healthcare administrators face in today's market by offering the expertise to assist you in your effort to deliver the highest quality patient care in the most affordable way possible. Please call us for more information: 866-523-3278. Some countries may not offer these programs. Please contact your country representative.

### Financial Benefits

#### **Flexibility**

As your business grows and your needs change, you can add or upgrade at any point during the term through add-on schedules. You also have the option to include service contracts.

#### **Upgraded technology**

The healthcare industry demands that you have the latest technology, so a short-term operating lease can help you get the equipment and keep your cash. Your risk of getting caught with obsolete equipment is lower because you can upgrade or add equipment to meet your ever-changing needs.

#### **Flexible end-of-term options**

There are several options for disposing of equipment after the lease term ends, including returning the equipment, renewing the lease, or purchasing the equipment.

#### **100% financing**

Since a lease does not require a down payment, it is equivalent to 100% financing, which means you have more money to invest in revenue-generating activities.

#### **Customized solutions**

A variety of products are available, allowing you to tailor a program to fit your month-to-month or year-to-year cash flow needs. You are able to customize a program to address your needs and requirements, e.g., cash flow, budget, transaction structure, cyclical fluctuations.

### Financial Programs

#### **Cost-Per-Case Program**

A program where you pay for the equipment as you use it. The cost-per-case expense can be applied to your operating budget, thereby freeing up capital budget dollars.

#### **Cost-Per-Consumable Program**

A program that enables you to standardize your OR with all Smith & Nephew products. An upcharge that covers the equipment you wish to acquire is applied to your consumables.

#### **Fixed-Cost Financing Program**

A fixed cost for the equipment you wish to acquire is invoiced monthly for your desired term. The fixed cost may be treated as an operating expense, thereby freeing up capital budget dollars. Consult with your accounting professional for advice.

#### **Customized Program**

Smith & Nephew will design a program tailored to meet your specific needs:

- Operating Leases
  - Capital Leases
  - Deferred Payment Program
  - Step Up Lease Program
  - Seasonal Cash Flow Lease Program
